Central tendency

Data: 2,3,3,3,4,6,6,9,12,13,13

Mean $(2+3+3+3+4+6+6+9+12+13+13)/11 = 6.72$

Median Middle score: 6

Mode Most frequent score: 3

The effect of outliers:

Mean $2+3+3+3+4+6+9+12+13+13+31/11 = 9$

Median $2+3+3+3+4+6+9+12+13+13+31/11 = 6$

Central tendency

A child language researcher investigates the emergence of verbal particles in the speech of two children. Verbal particles occur in five different contexts in his data.

- | | | |
|-----|----------------------|---|
| (1) | He picked me up. | [Transitive verb particle construction] |
| (2) | He walked away. | [Intransitive verb particle construction] |
| (3) | I am back. | [Predicative verb particle construction] |
| (4) | Shoes on. | [Fragmented verb particle constructions] |
| (5) | Put it on the table. | [Prepositional construction] |

Variance

Measurements for the spread of data:

- Range
- Variance
- Standard variation

Range: 2,3,3,3,4,6,6,9,12,13,13 = 2 - 13

Standard variation

$$\sigma = \sqrt{\frac{\sum (x_i - m)^2}{n-1}}$$

Standard variation

| S | words |
|---|-----------------------------------|
| 1 | 3 |
| 2 | 7 |
| 3 | 4 |
| 4 | 9 |
| 5 | 12 |
| 6 | 9 |
| 7 | 11 |
| 8 | 4 |
| | $\Sigma 59 / 8$ $= 7.4$ (mean) |

Standard variation

| S | words | (= $X_1 - X_{\text{mean}}$) |
|---|---------------------------------|------------------------------|
| 1 | 3 | $3 - 7.4$ |
| 2 | 7 | $7 - 7.4$ |
| 3 | 4 | $4 - 7.4$ |
| 4 | 9 | $9 - 7.4$ |
| 5 | 12 | $12 - 7.4$ |
| 6 | 9 | $9 - 7.4$ |
| 7 | 11 | $11 - 7.4$ |
| 8 | 4 | $4 - 7.4$ |
| | $\Sigma 59 / 8$ = 7.4 (mean) | |

Standard variation

| S | words | ($=X_1 - X_{\text{mean}}$) | d_1 |
|---|-----------------------------------|------------------------------|--------------------|
| 1 | 3 | $3 - 7.4$ | -4.4 |
| 2 | 7 | $7 - 7.4$ | -0.4 |
| 3 | 4 | $4 - 7.4$ | -3.4 |
| 4 | 9 | $9 - 7.4$ | 1.6 |
| 5 | 12 | $12 - 7.4$ | 4.6 |
| 6 | 9 | $9 - 7.4$ | 1.6 |
| 7 | 11 | $11 - 7.4$ | 3.6 |
| 8 | 4 | $4 - 7.4$ | -3.4 |
| | $\Sigma 59 / 8$ $= 7.4$ (mean) | | $\Sigma 0 / 8 = 0$ |

Standard variation

| S | words | ($=X_1 - X_{\text{mean}}$) | d_1 | d_1^2 (residuals) |
|---|-----------------------------------|------------------------------|--------------------|---------------------|
| 1 | 3 | $3 - 7.4$ | -4.4 | 19.36 |
| 2 | 7 | $7 - 7.4$ | -0.4 | 0.16 |
| 3 | 4 | $4 - 7.4$ | -3.4 | 11.56 |
| 4 | 9 | $9 - 7.4$ | 1.6 | 2.56 |
| 5 | 12 | $12 - 7.4$ | 4.6 | 21.16 |
| 6 | 9 | $9 - 7.4$ | 1.6 | 2.56 |
| 7 | 11 | $11 - 7.4$ | 3.6 | 12.96 |
| 8 | 4 | $4 - 7.4$ | -3.4 | 11.56 |
| | $\Sigma 59 / 8$ $= 7.4$ (mean) | | $\Sigma 0 / 8 = 0$ | $\Sigma 81.87$ |

Standard variation

| S | words | ($=X_1 - X_{\text{mean}}$) | d_1 | d_1^2 (residuals) |
|---|---------------------------------|------------------------------|--------------------|---------------------|
| 1 | 3 | $3 - 7.4$ | -4.4 | 19.36 |
| 2 | 7 | $7 - 7.4$ | -0.4 | 0.16 |
| 3 | 4 | $4 - 7.4$ | -3.4 | 11.56 |
| 4 | 9 | $9 - 7.4$ | 1.6 | 2.56 |
| 5 | 12 | $12 - 7.4$ | 4.6 | 21.16 |
| 6 | 9 | $9 - 7.4$ | 1.6 | 2.56 |
| 7 | 11 | $11 - 7.4$ | 3.6 | 12.96 |
| 8 | 4 | $4 - 7.4$ | -3.4 | 11.56 |
| | $\Sigma 59 / 8$ = 7.4 (mean) | | $\Sigma 0 / 8 = 0$ | $\Sigma 81.87$ |

Standard variation

Variance: $81.87 / (8-1) = 11.7$

The variance is a meaningless measure.

Standard deviation: $\sqrt{11.7} = 3.42$

70% of the data fall within one SD from the mean:

70% of all sentences in the sample include between 3.98 and 10.82 words.

z-scores

Scores from two different language proficiency test:

| | Test 1 – candidate A | | | Test 2 – candidate B | | |
|----------|----------------------|------|----|----------------------|------|----|
| Scenario | Score | Mean | SD | Score | Mean | SD |
| 1 | 41 | 49 | | 53 | 49 | |

z-scores

Scores from two different language proficiency test:

| | Test 1 – candidate A | | | Test 2 – candidate B | | |
|----------|----------------------|------|----|----------------------|------|----|
| Scenario | Score | Mean | SD | Score | Mean | SD |
| 1 | 41 | 49 | | 53 | 49 | |

| 3 | 41 | 49 | 8 | 53 | 58 | 5 |

z-scores

$$z = \frac{x - \mu}{\sigma}$$

z-scores

| S | Number of words |
|---|--|
| 1 | 73 |
| 2 | 42 |
| 3 | 36 |
| 4 | 51 |
| 5 | 63 |
| | $\Sigma 265 / 5 = 53$ (mean) SD = 15.12 |

z-scores

| S | Number of words | ($=X_1 - X_{\text{mean}}$) | d_1 |
|---|--|------------------------------|-------|
| 1 | 73 | $73 - 53$ | 20 |
| 2 | 42 | $42 - 53$ | -11 |
| 3 | 36 | $36 - 53$ | -17 |
| 4 | 51 | $51 - 53$ | -2 |
| 5 | 63 | $63 - 53$ | 10 |
| | $\Sigma 265 / 5 = 53$ (mean) SD = 15.12 | | |

z-scores

| S | Number of words | ($=X_1 - X_{\text{mean}}$) | d_1 | $z = (d_1 / \text{SD})$ |
|---|--|------------------------------|-------|-------------------------|
| 1 | 73 | $73 - 53$ | 20 | 1.32 |
| 2 | 42 | $42 - 53$ | -11 | -0.73 |
| 3 | 36 | $36 - 53$ | -17 | -1.12 |
| 4 | 51 | $51 - 53$ | -2 | -0.13 |
| 5 | 63 | $63 - 53$ | 10 | 0.66 |
| | $\Sigma 265 / 5 = 53$ (mean) SD = 15.12 | | | |

Example

Zwei Kandidaten haben an zwei unterschiedlichen Sprachtests teilgenommen. Kandidat A hat 121 Punkte erzielt, Kandidat B hat 177 Punkte erzielt. Im ersten Test (an dem Kandidat A teilgenommen hat) lag der Mittelwert bei 92 und die Standardabweichung bei 14; im zweiten Test (an dem Kandidat B teilgenommen hat) lag der Mittelwert bei 143 und die Standardabweichung bei 21. Welcher der beiden Kandidaten hat besser abgeschlossen (im Vergleich zu allen übrigen Kandidaten)?

$$Z_A = 121 - 92 / 14 = 2.07$$

$$Z_B = 177 - 143 / 21 = 1.62$$

Coefficient of variance

$$CV = \frac{\sigma}{\mu} * 100$$

Coefficient of variance

Over a 4 months period a mean number of 90 parking tickets was issued. The standard deviation was 5. The tickets yielded an average of \$5400 per day and the SD was \$775. Where do you have more variability, in the number of parking tickets that were issued each day or in the amount of money that was generate each day?

Parking tickets: Mean = 90, SD = 5

Fines: Mean = 5400, SD = 775

Parking tickets: $CV1 = 5/90 \times 100 = 6\%$

Fines: $CV2 = 775/5400 \times 100 = 14\%$
